StockMasterTM
SAFETY AT EVERY STEP

StockMaster Navigator is an Auto-Safe and easy to use mobile platform ladder.

StockMaster Navigator features a Move, Steer and Brake control which keeps all four feet firmly on the ground unless you're moving it.

Taking hold of the control raises the unit to the mobile position and provides easy positive steering. Release of the control automatically returns Navigator to the stationary mode where it is braked and completely stable. All skating and instability associated with designs that use springs or foot pedals is eliminated, and there is no movement as the operator moves about the platform.

One control does it all creating a much safer product.

Using the Move, Steer and Brake control the operator is positioned away from the front of the ladder to allow a normal walking step, and the unit moves quickly and easily with minimal effort. Navigator will move to a new position in less than half the time of competing products. The Move, Steer and Brake control also enables the platform to be used as a trolley.* Navigator is easier and faster to move around saving time and equipment.

StockMaster Navigator Pro features a Safety Rail system that can be adjusted to suit your job, providing improved ergonomics and easy access for stock picking and many other tasks, and with Navigator Pro you are protected against accidentally stepping off the front of the platform.

Featuring the unique and fully automatic StockMaster Auto-Gate, Navigator Pro frees your hands to carry an item and still maintain a safe grip as you leave or enter the workspace.

StockMaster Navigator Platform Ladders are ...

- ✓ Auto-Safe
- ✓ Easier and faster to move around
- ✓ Complete with a safety railing system that can be adjusted to suit the job*
- ✓ Equipped with an automatic closing gate at the platform entry*
- ✓ Designed and tested to a 150 kg load rating
- ✓ In conformance with Australian, New Zealand, US and European Union Standards
- ✓ and, cost less in the long run

Navigator Pro*

StockMaster Navigator keeps all four feet firmly on the ground unless you're moving it.

One control raises the unit to the mobile position and provides easy positive steering

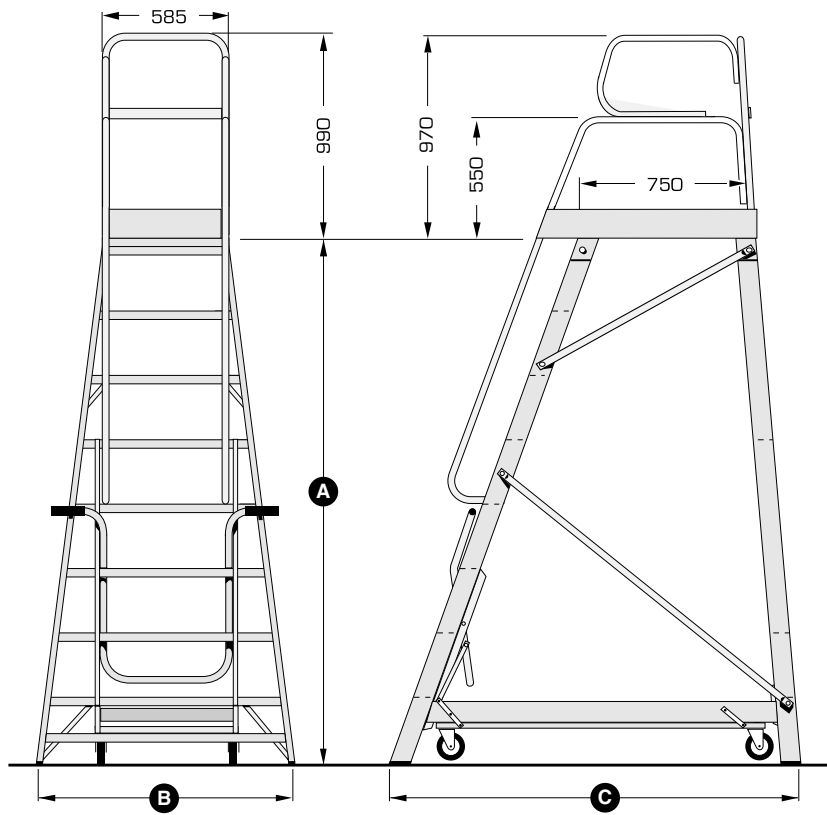

StockMaster Navigator Pro has a safety rail system that can be adjusted for stock picking.

StockMaster Navigator is a modular design enabling parts replacement in the event of accidental damage. It is manufactured from high quality materials and built to last. With reasonable care StockMaster Navigator will give many years of service, and cost less in the long run.

StockMaster Navigator meets or exceeds all the requirements of the Australian / New Zealand standard AS/NZS 1892.1:1996, US standard ANSI-ASC A14.2-2007 and the European Standard EN 131: Parts 1 and 2

*Not recommended for large sizes.
